PIXEL Raised Access Flooring offers comprehensive solutions of High Tech Raised Access Flooring Systems for the construction industry.

PIXEL Raised Access Flooring are manufactured according to most common international standards to meet the requirements of commercial, residential, governmental, transportation, healthcare, and educational projects.

In addition to its wide array of Raised Flooring panels and variety of finishes, **PIXEL** provides the technical expertise via its qualified and dedicated team of engineers and industry-experts in the field. **PIXEL** range of products is manufactured from high quality raw material and designed to meet all International Standards.

Scope of Application

Raised access flooring system is an elevated floor that is laid above a sub-floor, in order to leave an open space or void.

Raised floor system was commonly used in data centers and computer rooms. Nowadays, and due to the increased application of advanced technology which requires proper cable management, Raised Flooring through their flexibility has become a key component in today's intelligent buildings and an effective solution in General Offices, Schools, Universities, Power Stations, Labs, and others.

Benefits of Raised Flooring

The most common usage for access floors is to run cables, electrical wiring and HVAC ducts. Running cables and electrical wiring through the accessible space between the panels and the sub-floor allows easy access and flexibility; wiring can be rerouted, repaired and upgraded without construction and minimal interference to the business' everyday activity. When combined with modular electrical systems and modular walls, the entire building can be reconfigured in a fraction of the time it would traditionally take.

Heating and cooling a building with a raised flooring system is also more efficient. The empty space between the panels and the sub-floor acts as a plenum chamber to dispense conditioned air evenly throughout the building. Additionally, since warm air rises, heating the building from the access floor gap during the winter is more effective and efficient.

Raised floors are particularly useful for data centers and telecommunication facilities. Computer systems can rest on perforated tiles so that conditioned air is accessible for each unit. The equipment can then be designed to draw the cool air from below. With the increased efficiency and accessibility, access floors are an ideal alternative to suspended ceilings.

Composition

Raised Access Flooring System is a combination of panel bearing laid down on stringers and pedestals.

PANELS:

PIXEL Raised Flooring offers a variety of panels including calcium sulphate panels, cementitious steel composite Panels, and Chipboard panels as well.

Pixel panels are fabricuted with bare finish, or covered with anti-static finishes such as high pressure laminate floor cover, vinyl floor covering, ceramic finish, and carpet, etc.

PEDESTALS:

PIXEL Galvanized Steel Pedestals: A vertical, adjustable part that supports the floor panels, with heights ranging from 100mm up to 2000mm. (The height of the under structure system is dictated by the volume of cables and other services to be stored beneath the raised floor). The panel is attached to the pedestal head at each corner. These pedestals are usually bonded to the sub-floor with mechanical fixings.

STRINGERS:

Stringers are horizontal pieces that connects to the pedestal heads, adding additional lateral floor support, while needed.

Standards

PIXEL Raised Access Flooring Systems are designed to meet the requirements of International Standards to achieve the highest quality, ASTM-CISCA American standards and UNE EN 12825 European Standards.

PIXEL Raised Access Flooring Systems are manufactured according to market requirements and is dependent on the type of traffic and static or dynamic load it will bear.

Production - Inspection Standards

Every component of PIXEL Raised Access Flooring is regularly checked during production process with our own measurement equipment laboratory following a rigorous control method to the highest standards.

Dimensional Tolerance

	Panel Side Length Tolerance:	±0.2 mm	
2	Panel Squareness:	±0.3 mm	
	Straightness of Sides:	±0.3 mm	
/	Panel Thickness Tolerance:	±0.3 mm	
	Panel Twist:	0.5 mm	
	Panels Vertical Wrapping:	0.3 mm	
2	Difference in Height Between Perimeter Trims and Panel Surface:	±0.3 mm	

Note: Limit panel thickness tolerance of the same batch floor is 0.3 mm.

Mechanical properties

• Load Performance of the Floor.

The load bearing capability of a raised access flooring system is determined by the type of access flooring panel specified.

PIXEL									
Туре	Concentrated Load(deflection=2mm)		Deflection Permanent (mm) Deformation		Impact	Ultimate	Uniform	Rolling L	bad
	N	Kg		(mm)	Load (N)	Load (N)	Load (N/m)	10 Passes (N)	10000 Passes (N)

Impact Resistance

After the floor impact performance test, the permanent deformation of the floor surface should be \leq 1.5 mm, and there should be no damage.

Anti-static panel covering wear resistance

Material	Abrasion Resistance	Wear Resistance
HPL		ANN A
Vinyl		

Pedestal Axial Load:

Axial load of adjustable pedestals should be > 20 kN.

Fireproof Performance

The fireproof performance of PIXEL Raised Access flooring reaches B1 and A levels.

Floor Appearance

Raised access flooring should be assembled finely, keeping the seams neat and tidy, firmly bonded, with no opened glue. Surface covering and finishes should be stain-resistant, nonslippery slip, with no visible chromatic aberration, blistering and defect, and without glaring, .

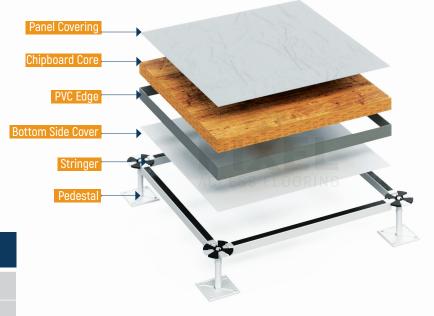

The metal surface features a strong anti-rust layer.

The floor with galvanizing should have a metallic luster and no defects. The floor treated with spraying should be soft light, without obvious color difference, foaming and defects.

PIXEL Chipboard Panel PIX-WOOD

PIX-CAL raised access flooring is made of high density chipboard core material. The top surface can be covered with multiple floor covering such as HPL, Vinyl, Carpet, Ceramic, etc.

The bottom surface of the panel is covered with aluminum foil and galvanized steel sheet.

PIXEL Steel - Cementitious Panel PIX-STEEL

PIX-STEEL raised access flooring consists of epoxy coated hard steel top plate formed through stamping and spot welding to deep stretched steel tray, filled with foaming cement in the middle.

The combination of steel and concrete provides economic series of product grades, capable of matching the most demanding requirements. Panels are made either with bare finish (Epoxy coated), or with anti-static finishes with high pressure laminate or with vinyl, ceramic finish, and carpet, etc.

PIXEL Calcium Sulphate Panel PIX-CAL

PIX-CAL raised access flooring panels are manufactured from high strength non-combustible Calcium Sulphate using environmental friendly materials: ~ 90% gypsum (calcium sulphate semi-hydrate), ~ 9% cellulose fibers.

Calcium Sulphate panels can be covered with a variety of finishes including HPL, Vinyl, Carpet, Ceramic, and others.

The Bottom surface is covered with Aluminum foil and galvanized steel sheet.

PIXEL UNDER-STRUCTURE SYSTEM STRINGERS

S-shape

Electro galvanized steel square shape. Size: 25x25x0.9mm with polyethylene acoustic insulation.

This profile is suitable for calcium sulphate and chipboard panels.

R-shape

Electro galvanized steel rectangular shape. Size: 32x21x0.9mm with polyethylene acoustic insulation.

This profile is suitable for cementitious panels only.

Benefits:

- Enhance the load bearing capacity.
- · Horizontal stiffening of the whole system.

PIXEL UNDER-STRUCTURE SYSTEM BRACING

In order to enhance the stability and safety of raised flooring system with extremely high support heights, it is necessary to install additional bracing system on the original supporting structure to form a Seismic forceresistant structure.

Pixel bracing consists of a perforated galvanized steel strip of 20mm width and 1mm thickness, bolted to a substructure from one side and connected to a turnbuckle stretching screw.

A washer inserted to the pedestal is used as a connection.

PIXEL Perforated Panels

Perforated panels specially constructed to allow air flow distribution from under the raised access floor, PIXEL Raised Access Flooring offers a wide range of steel perforated panels with or without damper for regulating air flow.

- Panel size: 600x600mm.
- · Load ratings are equal to non perforated panels.
- Perforation rate: From 10% up to 48%.
- Panel finishing: Epoxy coated.

1) PIXEL - Perforated Type (PU)

This panel is applicable for all PIXEL Raised Access Flooring Panels. Thickness: 30 up to 45mm.

PIXEL Raised Floor Service Power Boxes

PIXEL provides raised floor boxes for power outlets and data connections to desks and workstations within the modern office environment.

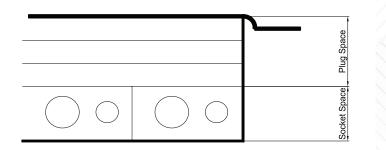

Designed and manufactured according to BS EN 60670-1:2005, BS EN 60670-23:2008.

- · Available as standard type or heavy duty type.
- Boxes are supplied with dividers for quick and easy configuration as 3 or 4 compartment boxes that enables connection to a range of power, voice, and data socket plates.
- The standard support plate is 3mm thick and allows high traffic volume. In the case of very heavy traffic volume, a robust steel sub-frame can be used to support the lid.
- The sub-frame doesn't restrict space for wiring and accessories. It also allows fine adjustments to be made to accommodate uneven flooring.
- PIXEL floor boxes are made from galvanized steel and is available as stainless steel finish upon request.
